Senior DevOps Engineer (Kubernetes/RKE, Docker, CI/CD, Microservices)
Location: Bengaluru, Karnataka (On-site)
Work mode: Work from office (WFO)
Notice period: Immediate to 30 days

About the Role
We are looking for a skilled Senior DevOps Engineer with strong expertise in Kubernetes, RKE (Rancher Kubernetes Engine), Docker, and CI/CD. The ideal candidate will have hands-on experience managing containerized microservices, automating deployments, supporting production environments, and improving platform reliability.
If you enjoy solving complex infrastructure challenges and working with modern cloud-native technologies, we'd like to hear from you.

Key responsibilities:

- Orchestrate/ Architect software apps required to Lead design of upgrades, downgrades and package of microservices in Kubernetes environment for development, production and post-production
- Package & Deploy the builds in Kubernetes environment using /Dockers/Virtual Machines/Ansibles[Sandbox & Production Nodes.]
- Handle production issues, support new microservice apps & database design for deployments in containerized environments
- Good at yaml, Python, Shell, Ansible Scripts
- Docker/container: Must know how to create docker images and create containers
- Must be familiar with JIRA, BITBUCKET, JENKINS
- Must know either of MySQL/Mongodb database management
- Domain : Microservice Applications

Value Add:

- Exposure to ELK, Kafka, Development experience
- ClickHouse , Influx DB expertise, Good understanding of Janusgraph
- Well-versed with microservices and microfrontend architecture
- Ability to perform Scans and CVE checks and figure our critical findings

Platform:

- Primary: Linux
- Secondary: Windows

Professional Requirements:

- Knowledge of design principles and fundamentals of architecture
- Knowledge of quality processes and estimation techniques
- Ability to translate functional / nonfunctional requirements to systems requirements
- Ability to design and code complex programs and troubleshooting skills
- Awareness of latest technologies and trends
- Logical thinking and problem solving skills along with an ability to collaborate

What We're Looking For

- Strong analytical and troubleshooting abilities.
- Excellent communication and collaboration skills.
- Ownership mindset with the ability to work independently.
- Passion for automation, cloud-native technologies, and continuous improvement.

Additional Information

As this role involves long-term platform ownership, product knowledge, and critical production responsibilities, selected candidates will be expected to commit to a minimum employment period of 18 to 24 months, in accordance with company policies discussed during the hiring process.
If you're passionate about Kubernetes, DevOps, automation, and building reliable production platforms, we'd love to connect with you.
